(346)-812-3285 | ausnguybusiness@gmail.com | Houston, TX | linkedin.com/in/austin-nguyen-business | ausnguy.github.io/austin-portfolio

EDUCATION

University of Houston, C. T. Bauer College of Business **May 2027**
B.B.A: Management Information Systems
GPA: 3.9 | **Dean's List:** Fall 2023 – Fall 2026
Relevant Coursework: Data Programming, Database Management Systems, Systems Analysis & Design, Business Statistics
Awards: Ted Bauer Scholarship | Lockheed Martin Vocational Scholarship | George Foundation Scholarship

SKILLS

Languages: SQL, Python (Pandas, NumPy, PyTorch, Matplotlib), TypeScript, Java, R, JavaScript, React
Data Engineering: Kafka, Spark Structured Streaming, PostgreSQL, FastAPI, Docker
Data Visualization & Analytics: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), DAX, KPI Reporting
Tools & Concepts: AWS, DynamoDB, Linux, Git/GitHub, Agile, SLURM/HPC
Certifications: Databricks Fundamentals, SQL (Intermediate) – HackerRank, Programming in Python – HPE

EXPERIENCE

Hewlett Packard Enterprise (HPE) **May 2026 – Present**
Data Analyst Intern – Compensation & Equity

- Built and owned an automated BI pipeline (Power Query, SharePoint, Power BI, DAX) to consolidate 8 Workday datasets, replacing manual reporting and saving **7 Compensation Managers 10–12 hours per reporting cycle.**
- Enabled faster compensation decision-making by creating a single source of truth in Power BI for pay guidelines, salary ranges, equity budgets, and compensation calculations across **66,000+ employee records.**
- **Engineered a Python forecasting pipeline** (Pandas, scikit-learn, XGBoost, Power BI/XMLA) backtesting 8 statistical and ML models across 14 fiscal quarters, finding a **$164M gap in projected channel sales**.

USI Insurance Services **June 2025 – July 2025**
Data Analytics Intern – Employee Benefits

- Analyzed **$1M+ in healthcare claims** data using Excel, performing cost trend, utilization, and benchmarking analysis to identify patterns and support renewal strategies for 10+ employer clients.
- Standardized **5,000+ row** healthcare datasets via cleaning, normalization, and reconciliation.

ToolAndMore **November 2023 – April 2024**
Owner & Operator

- Generated **$75K+ in first-year revenue** by launching and scaling an Amazon e-commerce business.
- Maintained **30%+ profit margins** through ROI, sourcing, and pricing analysis that guided purchasing.

ACADEMIC PROJECTS

Interdomain - Real-Time Routing Platform | *Python, Kafka, PostgreSQL, Spark, FastAPI, Docker* Case study

- Built an end-to-end real-time data platform for monitoring global Internet routing activity, processing **~8.7K streaming events/sec (~33K records/sec)** from 23 worldwide monitoring locations and serving near-real-time health metrics.
- Scaled the pipeline with 5K-record batch ingestion, pre-aggregated minute metrics, and time-partitioned storage, eliminating a 19.6M-message backlog and reducing dashboard query latency **>99% from 13–27 sec to 44–62 ms.**

Parvius: Parts Readiness System (CaseQuest 2026) | *Python, NumPy, TypeScript, Redis* Case study

- Co-built a failure-prediction model (logistic regression written from scratch in NumPy) that **flagged 90 of 91 mechanical failures on unseen data (AUC 0.82),** a median 1.5 days ahead.
- Recommended a spare-parts program **modeled to avoid ~968 downtime hours a year,** and shipped a live 3D operations console and engineer phone app that share one state through a TypeScript/Redis API.

BNY Mellon Project: AI Emissions & Efficiency Modeling | *LLM Inference, Model Routing, Caching* **May 2025**
AI Infrastructure Research

- Reduced modeled AI energy **~70%** and inference latency **~55% (611 → 276 ms)** via model routing and caching.
- Built a lightweight Python logging layer to track compute use and flag inefficiencies.
