EDUCATION

University of Houston, C. T. Bauer College of Business **May 2027**
B.B.A: Management Information Systems
GPA: 3.9 | **Dean's List:** Fall 2023 – Fall 2026
Relevant Coursework: Data Programming, Database Management Systems, Systems Analysis & Design, Business Statistics
Awards: Ted Bauer Scholarship | Lockheed Martin Vocational Scholarship | George Foundation Scholarship

SKILLS

Languages: SQL, Python (Pandas, NumPy, PyTorch, Matplotlib), TypeScript, Java, R, JavaScript, React
Data Engineering: Kafka, Spark Structured Streaming, PostgreSQL, FastAPI, Docker
Data Visualization & Analytics: Power BI, Tableau, Excel (Pivot Tables, VLOOKUP), DAX, KPI Reporting
Tools & Concepts: AWS, DynamoDB, Linux, Git/GitHub, Agile, SLURM/HPC
Certifications: Databricks Fundamentals, SQL (Intermediate) – HackerRank, Programming in Python – HPE

EXPERIENCE

Hewlett Packard Enterprise (HPE) **May 2026 – Present**
Data Analyst Intern – Compensation & Equity

- Saved 7 Compensation Managers **10–12 hours per reporting cycle** by building and owning an automated BI pipeline (Power Query, SharePoint, Power BI, DAX) that consolidates 8 Workday datasets.
- Enabled faster compensation decisions across **66,000+ employee records** by creating a single Power BI source of truth for pay guidelines, salary ranges, and equity budgets.
- Identified a **$164M gap in projected channel sales** by engineering a Python forecasting pipeline (Pandas, scikit-learn, XGBoost) that backtests 8 statistical and ML models across 14 fiscal quarters.

USI Insurance Services **June 2025 – July 2025**
Data Analytics Intern – Employee Benefits

- Supported renewal strategy for 10+ employer clients by analyzing $1M+ in healthcare claims in Excel, covering cost trends, utilization, and benchmarking to identify patterns.
- Improved consistency of **5,000+ rows** of healthcare data via cleaning, normalization, and QA checks.

ToolAndMore **November 2023 – April 2024**
Owner & Operator

- Generated **$75K+ in first-year revenue** by launching and scaling an Amazon e-commerce business.
- Held **30%+ profit margins** through ROI, sourcing, and pricing analysis that guided purchasing.

ACADEMIC PROJECTS

Interdomain - Real-Time Routing Platform | *Python, Kafka, PostgreSQL, Spark, FastAPI, Docker* Case study

- Processed **~8.7K streaming events/sec (~33K records/sec)** from 23 worldwide monitoring locations by building an end-to-end real-time data platform for global Internet routing activity.
- Cut dashboard query latency **>99% (13–27 s to 44–62 ms)** and cleared a 19.6M-message backlog with 5K-record batch ingestion, pre-aggregated minute metrics, and time-partitioned storage.

Parvius: Parts Readiness System (CaseQuest 2026) | *Python, NumPy, TypeScript, Redis* Case study

- Flagged **90 of 91 mechanical failures on unseen data (AUC 0.82),** a median 1.5 days ahead, with a failure-prediction model of logistic regression written from scratch in NumPy.
- Projected **~968 fewer downtime hours a year** by recommending a spare-parts program, and delivered a live 3D operations console and engineer phone app on one shared TypeScript/Redis API.

BNY Mellon Project: AI Emissions & Efficiency Modeling | *LLM Inference, Model Routing, Caching* **May 2025**
AI Infrastructure Research

- Cut modeled AI energy use **~70%** and inference latency **~55% (611 → 276 ms)** via model routing and caching.
- Flagged compute inefficiencies by building a lightweight Python logging layer that tracks usage.
